15th - 18th November 2021

Ms Tanya Nowland

Impactful research about the intestinal microbiota in pigs

Ms Tanya Nowland is Research Scientist - pig reproduction and welfare at the South Australian Research and Development Institute. She has a background in animal science and her research interests include sow reproduction and welfare and how that relates to piglet health and survival. Specifically, her research has focussed on the development of non-antimicrobial industry applicable practices to help support healthy intestinal microbiota development and improve pre-weaning piglet performance. This research will enable improvements in animal health and farm productivity. Ms Nowland is completing her PhD on 'Development and manipulation of the piglet intestinal microbiota'.
